

## Instructions for Authors

- 1. Author Criteria.** MURR currently publishes research papers of all disciplines by West Virginia undergraduates or recent graduates within a year of graduation. Under most circumstances cases, an undergraduate researcher will be mentored by a faculty research mentor, and this mentor should be credited as a second author when appropriate.
- 2. Style.** Articles should be submitted in Microsoft Word (.docx) format, in 12 point Times or Arial font. With the exception of figure legends and references, articles should be double-spaced. Pages should be numbered, beginning with the first page. The manuscript layout should follow the conventions of the American Psychological Association (APA). References in manuscripts should be written in APA style.
- 3. Submissions.** All submissions should be made online through the Research Repository @ WVU, which can be found on the WVU Office of Undergraduate Research website under the page dedicated to the Mountaineer Undergraduate Research Review (<https://undergraduateresearch.wvu.edu/present-and-publish/murr>). All information identifying the author should be removed from files to allow them to be sent anonymously to referees. Submissions should include a clearly labeled (1) article title, (2) abstract, (3) one sentence summary, (4) article body, and (5) an author bio. Author bios should be written in the third person and will be removed prior to editing.
- 4. Article Title.** The article title should be 3–14 words long, written for a general audience. All significant words should be capitalized. Avoid using abbreviations in the title.
- 5. "One Sentence Significance."** The "One Sentence Significance" consists of no more than 125 characters and is meant to complement the article title and provide a quick look at the major result/significance of the article. This sentence should not simply restate the title, but serve to draw readers in to read the rest of the article.
- 6. Abstract.** The article abstract is a well-written, self-contained synopsis of the entire article, comprising 160–250 words. The abstract should be written without excessive technical language and should not contain references. In general, abstracts should begin with a brief introduction to the context and motivation for the study, include a brief explanation of the hypothesis/experimental approach, and finish by describing major conclusions and their relevance to the hypothesis/field.
- 7. Article Body.** The main text of the article should be between 1000 and 2500 words long, not including figure titles and legends. Unless a specific article can justify deviation from the standard format, empirical manuscripts should consist of the following headings, clearly identified in the text with bold-face subheadings: Introduction; Method (with subsections, e.g., Participants, Procedure, Measures, Research design); Results; Discussion; Acknowledgements (optional), Competing Interests, References; Appendices. All technical terms, abbreviations, symbols, and acronyms should be defined in the main text the first time that they are used. With the exception of the methods section, please avoid subheadings other than those outlined above. Note: the above scheme may not apply to certain articles in the arts/humanities. For all other manuscripts, authors are asked to defer to the conventions of their disciplines.
- 8. Figures and Tables.** Unless specifically instructed, figures and tables should appear in the main article text, near to where they are first referenced. Tables should be constructed using Microsoft Word's table function, and whenever possible, figures should be in a vector-based format (.ai, .pdf, .eps, .svg) to allow for resizing without resolution loss. Optimal figure resolution is 300 dpi. Color figures can be submitted in either RGB or CMYK color formats. Efforts should be made to ensure that figures and tables are clear, concise, and appropriate for the kind of data presented. Special efforts should be taken to ensure that figure text is readable at different figure sizes. Solid lines and clearly distinguishable colors should be used; avoid using red and green shades together. SI (metric) units should be used for all measurements. Figure/table legends should appear immediately below or beside corresponding figures: start the legend with the phrase "Figure X." or "Table X." followed by the figure/table title in bold-face, every significant word capitalized. When applicable, separate panels in a figure and label them with capital letters A–Z. In the main article text, refer to figures or tables by type, number, and panel ("Figure 2A" or "Table X"). Statistical tests, where appropriate, should be described in a dedicated subsection of the methods ("Statistical Analysis," or similar). If statistical tests are used in a figure, visual measures of uncertainty (e.g. error bars) should be included, and the specific test statistic which they represent should be noted in the figure legend. Conventions to indicate significance on the figure are at the author's discretion but should be explained in the corresponding figure legend. Sample sizes should also be reported in the figure legend.
- 9. Data/Image Processing.** Regarding figure and graphic manipulation, MURR defers to standard editorial guidelines in the academic publishing community. Unnecessary digital manipulation of figures should be avoided, and if edits must be made, they should be made to an entire image/figure. Obvious attempts at data manipulation deemed influential to data interpretation will be addressed with authors.
- 10. Studies Involving Humans and Animals.** MURR is in alignment with most major academic publications, in that any articles including experiments involving human or animal subjects must include a statement in the methods section informing that consent was obtained from all human subjects and identifying any committees which have authorized the use of laboratory animals. All human and animal studies must be performed in accordance with institutional and national guidelines and regulations. For more information, refer to the sources at the bottom of this document.
- 11. Gene and Chemical Names.** Genes, proteins, chemicals, and other specialized names should follow conventions which are in current use by the research community. If multiple names exist and are in use for a specific gene or protein, authors may choose to use one or all known names. However, gene, protein, chemical, and other specialized nomenclature must be consistent throughout the article.
- 12. References and Citation Format.** MURR does not specify a maximum number of references; however, authors should use good judgement and avoid exhaustive bibliographies. In general, STEM articles should contain 20–40 references. Reference number in arts/humanities articles is left to the authors' professional judgement. References should appear at the end of the article, numbered in the order in which they appear in the article. In-text citations should appear as superscripts containing only the number of the specific reference. Multiple references in a single superscript should be separated by commas as appropriate.
- 13. Author Biography.** Author bios may be 50–200 words and include and include personal, professional, and academic commitments of the author(s).
- 14. Acknowledgements.** If the authors wish, they may include a brief "Acknowledgements" section at the end of the article, before the reference section. This section should be as concise as possible.
- 15. Competing Interests.** All articles must include a section titled "Competing Interests" at the end, before the references sections, where the authors must disclose any competing interests. If the authors have no competing interests, they should include the statement "The authors declare no competing interests."
- 16. Oppressive Language.** Contributors should avoid sexist, racist, disabilist and otherwise oppressive language. The editors reserve the right to attend to any such insensitive language.
- 17. Journal Copies.** Digital copies of MURR are available online (<https://researchrepository.wvu.edu/murr>) or physical copies be obtained pending permission from the WVU Office of Undergraduate Research.
- 18. Copyright and Dual Publication.** MURR is an open access journal and authors retain the copyright to their articles. Authors may republish articles submitted to MURR, but are asked to carefully review the consequences of publishing in other journals that are under consideration. Most professional journals have strict policies concerning dual publication and transfer of copyright.
