ABSTRACT

The Inclusion of Organ Within the Concert Band Instrumentation with an Annotated Listing of Original Works for Concert Band and Organ

Matthew J. McCurry

There is a very limited amount of information regarding musical works available for concert band and organ. When used in conjunction with the concert band, the organ can serve different roles such as soloist with concert band accompaniment, a complimentary texture within the concert band sound, or the means for creating a majestic impact point or grand finale with full forces of organ and concert band combined. Although there are only a small number of works that fall into this category, composers continue to write works for concert band that include organ in the instrumentation. This document is an attempt at an exhaustive list of original publications for concert band that include organ within the work’s instrumentation. A request was sent to all publishers of print music within the Music Publishers Association of the United States (MPA) to find works that fit into this seemingly obscure category. Of the 331 requests sent, 127 responses resulted in 25 publishers with works of this nature. The resulting 68 pieces for concert band that include organ are listed with title, composer, publisher, publication year, duration, ensemble difficulty level and type, and organ difficulty level and type. In addition, a selection of composers whose works met these criteria were surveyed as to what role they found the organ fulfilling when used within the instrumentation, whether substitution or omission was preferred, and if omission of this instrument changed the intent of the work.
ACKNOWLEDGEMENTS

I am grateful to have had the opportunity to continue my education at West Virginia University. It has been an honor and privilege to learn from outstanding professors and the distinguished conducting faculty of Dr. Scott C. Tobias, Dr. Kym Scott, and Dr. Mitchell Arnold.

I wish to acknowledge, with deepest gratitude, the expertise and guidance of my doctoral committee members, Dr. Scott C. Tobias, Dr. Kym Scott, Dr. Evan MacCarthy, and Professor Lee Blair, all of whom showed great kindness and support throughout this study and completion of this degree. I am especially indebted to Dr. Tobias for sharing his wisdom, talent, and time with me and allowing me to share the podium throughout this entire process.

I would also like to thank Dr. Marshall Forrester for his guidance and encouragement in pursuing an advanced degree. His leadership, dedication, and example in furthering excellence in collegiate band programs laid a solid foundation for this author to travel down this path.

The daily encouragement and cooperation of my fellow officemates, Brandon Carbonari, Cody Lassinger, Brandon Buterbaugh, and Lamar Riddick made every day seem just a little less stressful, and for that I am very grateful.

Finally, I have been blessed with unending support from my parents, Mr. James R. and Dr. Alice H. McCurry, whom, without their unwavering faith, encouragement, and love, the completion of this degree would not have been possible.

_Soli Deo Gloria!_

**SELECTED QUALITY WORKS THAT FALL SHORT OF THE DELIMITATIONS OF THIS STUDY**
INTRODUCTION
Background and Purpose

Compositions for the concert band that include organ within the instrumentation are seemingly rare amongst the vast collection of works for the wind band. When searching catalogs and library holdings, discovering and locating these works also proves very difficult because of the inability to search by instrumentation within a collection. The absence of vital information such as the difficulty level of the piece, the difficulty level of the organ part, or the overall instrumental forces required for performance could cause difficulty in making programming decisions. Because of this, although they may find themselves in a venue with a quality instrument, conductors might not actively seek works that would include the use of the organ.

In a parallel study with works for concert band and chorus, a study after which this research is modeled, Dr. W. David Richardson describes this as a “cyclic problem.”¹ He describes this repeating pattern stating, “the lack of information about the compositions discourages their performance, the lack of performances discourages their composition, [and] the lack of composition discourages gathering information about the pieces.” The same cyclic pattern could apply here, however there is another factor involved when considering works for concert band and organ – the availability of a quality organ.

When selecting a piece for concert band that includes the organ, should a conductor not have access to a quality organ, should omission or substitution be considered? Many composers have intentionally marked the part as optional and cross-cued organ parts within the ensemble to make the work playable without the organ. However, should an electronic substitute present itself, whether an electronic organ or keyboard, would composers consider this type of

¹ W. David Richardson, “Original Compositions for Full Concert Band and Chorus Published in the United States.” (DMA diss., The University of Georgia, 2004).
substitution adequate to pursue the work’s intent? Some composers may actually prefer omission rather than an inadequate substitution. When considering this type of programming, these questions should not be left unanswered.

To help aid conductors that find themselves in this situation, this document contains an annotated listing of works for concert band and organ published at the time of the study. Inevitably (and with highest hopes), there will be many more added to this listing. In addition, to answer some of the questions posed, this document contains results from a composer survey in response to the use of organ within their compositions and their thoughts on appropriate substitution or omission of the organ part. By bringing an awareness to the availability of such compositions, hopefully it will encourage the performance of these works and even the compositions of new works for this medium.

**Literature Review**

There have been few studies about the use of organ in an orchestral setting and in transcriptions for concert band, but, at present, there appears to be no research into the purpose of the organ as a voice in the concert ensemble, nor does an annotated listing exist that allows one to discover these pieces. Databases have been created that allow for sorting by genre and providing a listing of instrumentation for an individual work, however, a method to find concert band pieces that include organ has not been devised other than the conductor’s ability to look at the instrumentation list on the musical score or on a publisher’s website.
A thesis project conducted by Johanna Marie Kremer in 1974 at Washington University entitled “The Organ in Symphonic Ensemble” focused on the organ’s use in the orchestra. In her study, she includes an appendix listing pieces available for orchestra and organ.

In a distantly related dissertational study entitled “The Pipe Organ as Inspiration for Wind Band Transcriptions with a Transcription of Charles-Marie Widor’s Symphony No. 5 in F minor and a Conductor’s Guide to Rehearsal and Performance,” author, John Lopez, relates the pipe organ to the wind band by instrument and timbre similarities, and in doing so, demonstrates the similarities between timbres and sonorities of the concert band. While Lopez’s study deals mainly with the ability to transcribe organ music as concert band literature, his discussion of tone, timbre, and orchestration techniques are beneficial to understanding organ characteristics and how they relate to the modern concert band.

There exist comprehensive indexes of concert band works such as The Instrumentalist Company’s Band Music Guide. This valuable publication provides a categorized list of concert band works published through 1989 and lists the title, composer, and publisher for each composition. However, being limited to only this information, there is no way to explore instrumentation to see what might be available for concert band and organ. In Section “C” of the book, under “Miscellaneous Solos,” one concerto is listed for organ and band. Had the word organ not been in the title, there would have been no way to identify this piece as inclusive of an organ part.

---

4 Raynor Brown, Concerto for Organ and Band
Frank Cipolla and Donald Hunsberger compiled a number of essays on the development of the wind ensemble in their book *The Wind Ensemble and its Repertoire*. The appendices of this book contain the repertoire of the Eastman School Symphony Band and Wind Ensemble from 1935-1992. While very informative of the types and development of wind ensemble programs, the information provided only lists title, composer, conductor, and guest soloists. Although works identified in this study were listed, none gave indication to whether or not organ was used. While an amount of quality literature is represented in these listings, these works are limited to conductor selection and cannot be used as a comprehensive index.

Frank Battisti, William Berz, and Russ Girsberger produced a resource guide in 2014 entitled *Sourcebook for Wind Band and Instrumental Music* that proved to be helpful in locating resources for research on this subject. The general resources listed in the first part of the book not only contain valuable information for band directors, but lists current information for music publishers that publish band music. Specific resources include composer websites and current (as of 2014) research into instrumental music. One work for concert band and organ, Michael Daugherty’s *Niagara Falls*, was listed as having organ within the instrumentation.

---

Defining the Scope of this Study

The purpose of this document was to list all works originally composed for concert band that includes organ within the instrumentation. As part of this study, works that are considered originally composed for the concert band were subject to a modern instrumentation using the minimum ensemble requirements of at least one part for the all following:

- Flute
- Oboe
- Bassoon
- Bb Clarinet
- Bb Bass Clarinet
- Eb Alto Saxophone
- Eb Baritone Saxophone
- Horn
- Trumpet
- Trombone
- Euphonium (Baritone)
- Tuba/Basses
- Timpani
- Percussion
- Organ (optional)

Works with any of these instruments omitted were not included. Works that were described as *Wind Ensemble or Wind Orchestra* but contained at least one player per part on the above minimum requirements were included. In some instances, works for wind orchestra (or the wind section of the orchestra) that omit saxophone and euphonium, were not included but are mentioned in a later section. Some works that were included contain well beyond this instrumentation and include many different color instruments, such as the Alto Flute, English Horn, Eb Contralto Clarinet, Bb Contrabass Clarinet, Contrabassoon, Bass Saxophone, Trumpet in C, Horn in Eb, among others. Harp, Piano, Synthesizer, Celesta and a myriad of percussion instruments are also found within this listing. Any auxiliary forces such as offstage or antiphonal brass ensembles, vocal soloists, or choruses of any kind are also included as long as the minimum requirement for the concert band with inclusion of organ is met. The use of strings
within the ensemble, besides the occasional string bass in conjunction with (not instead of) tuba and one instance of violin solo, were omitted from the study.

Transcriptions of works for other mediums were not included in this study except in the case where the original composer had transcribed his/her own work for concert band. For example, Michael Daugherty’s “Niagara Falls,” was originally written for orchestra and transcribed for concert band by the composer. Arrangements of specific themes, such as Christmas carols or hymn tunes were included as long as they were original works for band and were not titled as an arrangement of a preexisting work. Compositions that came very close to meeting the minimum requirements but fell short have been included in a section following the annotated listing of works in this document.

A secondary part of this research study was to survey composers as to their thoughts on the inclusion of organ within the concert band setting and how they viewed omission or substitution of the organ parts within their works. This survey is, of course, limited to living composers identified in the preliminary research as to having included organ within one of their works for concert band.

**Procedures for Identifying Works**

Publishers of concert band works were identified using many different sources. An internet search for “concert band music” resulted in identifying a large number of the major music publishers. The Music Publishers Association of the United States of America maintains a directory of over 500 members that is accessible through their website. From this list, it had to be determined through further research, which entries were publishers of printed music versus those that were publishers of lyrics and recordings. Once a list was established, complete with contact
information for each publisher, a request was sent to each individual company for assistance in locating works for concert band and organ within their catalog. Responses were collected for each publisher’s reply and organized into three groups:

- YES, the publisher did find works that met the criteria
- NO, the publisher did not have any works that met these criteria
- UNABLE TO CONTACT, publishers could not be reached due to incorrect contact information

Online publisher catalogs were searched extensively, limiting queries by searching for organ and limiting the ensemble to concert band or wind ensemble. The Wind Repertory Project, an online database for wind literature, was also used as a source for locating works because of its abilities to search through the instrumentation of each composition.

**Procedures for Surveying Composers**

Each living composer identified as having works for concert band and organ were electronically invited to participate in an anonymous research study. An email with an attached cover letter was sent to each composer with a description of the project, an invitation to participate, and a link to the online questionnaire. The composers were asked not to identify themselves in any way throughout the course of the questionnaire. The cover letter and questionnaire were subject to the approval of and was approved by the West Virginia University Office of Research Integrity and Compliance. The composers were asked four questions:

1. What does the inclusion of the organ within the concert band instrumentation add to the overall composition?

---

2. When a conductor is choosing music for a performance and there is not an organ available (electronic or pipe), would you consider a synthesized organ sound a suitable substitution?

3. Are there situations where substitution would not be acceptable, and omission would be preferred?

4. Does omission of the organ part take away from the original work as it was intended?

The anonymous questionnaire was open for one month from the initial email contact for composers to complete the questions. Twenty-five composers were identified in the initial research to participate in this study. Of these, ten composers (40%) responded to the survey.

**Description of Entry Formatting**

Each work found within the scope and delimitation of this study is listed alphabetically by title. Each title is followed by composer, date of publication, duration of the piece, number of movements (if applicable), the ensemble for which the work would be best suited, approximate grade level, and instrumentation. In order to help identify the purpose and difficulty level of the organ part, this information is also included.

For each grade level (graded 1-6) the following scale was utilized:

1 – Beginning Band  
2 – Intermediate Middle School Band  
3 – Advanced Middle School / High School Band  
4 – High School Band / Early Collegiate Repertoire  
5 – Advanced High School Band / Collegiate Band  
6 – Collegiate / Professional Band
Within each of these ratings is considered the length of the piece, the technical demands, the publishers rating and where the piece falls on state concert assessment lists (when applicable). Certainly, every group is different with some advanced-level high school bands easily able to play pieces in the grade 5 and 6 category. Conductors should be able to easily identify whether or not a piece is accessible to their individual group using this scale as a starting point for consideration.

The organ difficulty level is recorded on a scale considering a player who is familiar and experienced with the organ, registration and registration changes, and use of pedal work if needed. Again, the number of registration changes, dynamic responsibilities, length of the piece, and technical considerations were studied in each piece to determine a level rating. The rating system is as follows:

**Easy** – Mostly two-part writing, keyboard only, few registration changes, chorale-like

**Moderate** – Registration changes, more technical passages, increased pedal use

**Advanced** – Concerto, advanced technique needed, numerous registration changes

Also included for informational purposes is an organ category. Information provided in this section will help the conductor determine the organ’s intended use in a piece. For example, an organ concerto would be marked *part required, solo organ* to let a conductor know that the part is not optional, and the performance is dependent on the organ part being covered. If a part is optional or *ad lib.*, it will be marked here as well. Note that *ad libitum*, when referred to in the organ category, does not mean a part that is to be improvised, rather the Latin meaning of *at one’s pleasure*, or when available per the wishes of the conductor. Categories used in the listings are:
<table>
<thead>
<tr>
<th><strong>Sustain and Effect</strong></th>
<th>The organ is used for a special effect, sustained chords or notes.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Chorale-like</strong></td>
<td>The organ part is played in a hymn or chorale-like setting.</td>
</tr>
<tr>
<td><strong>Full Ensemble</strong></td>
<td>The organ is played as a voice or timbre within the full ensemble.</td>
</tr>
<tr>
<td><strong>Cross-cued in parts</strong></td>
<td>The organ part has been cued in other wind parts for use when an organ is not available.</td>
</tr>
<tr>
<td><strong>Grand Finale</strong></td>
<td>The organ is used to add power and majesty to the ending of the composition.</td>
</tr>
<tr>
<td><strong>Part Required</strong></td>
<td>The organ part plays an important role in the piece, whether solo or individual part and must be used to perform the composition.</td>
</tr>
</tbody>
</table>

Other notes relating to each individual piece may be notated in the organ category or the organ difficulty level as needed.
THE USE OF ORGAN IN A COMPOSER’S WORKS
Survey Results from Composer Questionnaire

The organ, referred to and praised as the “King of Instruments” by composers like Mozart and Machaut, was developed over many centuries to imitate the sounds of various orchestral and wind band instruments. Even with its imitative qualities, it is sometimes used as an ensemble voice within the modern concert band or as a unique solo instrument. When used in conjunction with a concert band, it can lend its voice as a magnificent show of power, fanfare, and majesty. In their book The Technique of Orchestration, composers Kent Keenan and Donald Grantham attempt to summarize the use of the organ in compositions when they write:

The organ is sometimes used in orchestral scores to supply added volume (generally at climactic points), liturgical atmosphere, or simply its own majestic tone quality. Occasionally the pedals alone, especially with the 16-foot or 32-foot stops, are used to double the lower orchestral instrumentations for an extra-dark, ponderous effect. Many timbres and textures are available through the stops. 8

There are many areas that they address in this statement that will be discussed throughout many composers’ responses in the following section. Interestingly, the statement above only refers to orchestral scores and doubling orchestral instruments, however, the idea of supplying certain textures and timbres that only the organ can provide is still sound. These textures blend magnificently with the sounds within the concert band just as easily and effectively.

Many times, because of the lack of availability, the organ is omitted from a performance as non-essential to the overall effectiveness of the piece. It was, however, the composer’s intent to have the organ’s voice sounding at a particular time in the music. Composers who use the organ as a voice within the ensemble must have reason for its inclusion. The composer

---

questionnaire was designed to gain an insight into why composers use the organ within the concert band setting and what their feelings are when it comes to omission or substitution.

**Question 1:** What does the inclusion of the organ within the concert band instrumentation add to the overall composition?

A number of descriptors were given in answer to this question. Words such as *added color, texture, power, majesty, impact, and grandeur* were all adjectives to describe what effect the organ can have during the performance of a piece. The amount of depth that the pedals add when using 16’ or 32’ stops was mentioned in more than one response as well as the “colors” of the upper stops such as the 2’ stops or the mixtures that are unique to the organ. The organ is naturally set up to blend well with the wind ensemble from top to bottom, but there are times when the organ can be “felt more than heard” as an additional texture to the ensemble. One composer spoke of the ability of the organ to “shake a building” to help the audience physically feel the music versus times when it can also add “sweet, quiet moments with its string/celeste stops that produce a unique, necessarily aged, and captivating sound only the organ is capable of.” The use of organ within a concert band was also described as “adding an extra choir” to the ensemble. The ability to bounce back and forth between woodwind choir, brass choir, and the organ adds textural depth to pieces composed for this combination.

**Question 2:** When a conductor is choosing music for a performance and there is not an organ available (electronic or pipe), would you consider a synthesized organ sound a suitable substitution?

The responses to this question all stemmed around one global response – the sound quality of the substitute for the organ. Although most of the responses did say yes, a synthesized organ sound would be acceptable, many included a statement such as *if the sound quality was*
acceptable and suitable amplification was available. The responding composers agreed that keyboards typically do not have the correct sound needed for what they had imagined the organ part fulfilling. One composer described the artificial keyboard sound as having a “limited EQ range, resulting in highly tinny sounds that do not remotely replace the acoustic organ sound.” Combined with the fact that a typical keyboard will only have one organ sound replicating full organ, it is possible to not actually meet the needs of the organ part. Another response addressed the player more than the sound of the synthesized organ. The organ part is written with a certain organ quality in mind, meaning, articulation, sustain, and often means of changing between notes. As one response said, “it takes a pianist who can think and voice the part like an organ” in order for it to be effective as intended. Although the synthesized sounds are improving, one composer did mention that if the venue did not have an organ, there is a “rise of electric organs available for purchase and rent” and it may be worth considering these instruments when planning pieces that call for organ. As mentioned earlier, it would not only depend on the electronic instrument itself, but a high-quality sound system that could match the high and low frequencies of the organ in order to make it effective. Simply using a guitar amplifier to a keyboard will not give the impression that there is an organ playing with a large ensemble.

**Question 3: Are there situations where substitution would not be acceptable, and omission would be preferred?**

This question stemmed more of a polemic debate than the others with half answering yes and half no, but most with extra explanation. Somewhat related to question 2, remarks about the quality of the instrument were the deciding factor. If there is a quality substitute instrument, then the part should certainly be played on that instrument. One composer went so far to say that, speaking specifically of his/her compositions, the works “should be performed with organ or a
reasonable substitute, or not performed at all.” This was reiterated in another comment where the organ was intended to be used for its soloist qualities and plays a “vital” role in the work. In this case, the composer stated that, “neither keyboard nor omission would be acceptable” for this work. Other responses referred to the purpose of the organ to the ensemble. If the organ is used to “beef up the finale” in a piece, then omission would be preferable as to using a keyboard substitute that was of inadequate quality. There are such cases where organ has important solo sections where a substitute should be used if the parts were not cross-cued in other instruments. However, one composer responded based on the intent to include organ within the instrumentation stating, “if I write for organ, I want to hear it!”

**Question 4:** Does omission of the organ part take away from the original work as it was intended?

Once again, the idea of the quality of sound is expressed in answer to this question. In a sense that a poor sounding organ substitute would diminish the effect of the work, omission is preferred. Admitting that, yes it does take away from the original intent, some agree that a performance with a responsibly omitted *ad lib* or optional organ part would be preferred over non-performance of the piece. In the case where the organ is solo or concerto-like within a piece, omission completely changes the work as it was intended, and responsible decisions should be made as to the appropriateness for a performance. One composer related the omission of the organ to omission of other instruments called for in the score, stating specifically that omission of the organ part affects the intent of the piece “in the same way that omission of a double bass takes away from the composer’s original intent.” If there was intent to include organ in the score, it was for a reason. Whether that reason be for a grand finale in which the organ mixtures and pedal stops add texture to the ensemble that is “both felt and heard,” or whether the soloistic
sections were written for only a sound the organ can produce with its softer stops, the intent changes when the instrument is not present. While some parts are marked *optional* or *ad lib.*, the intent of adding the organ creates something special within the piece that should be carefully contemplated before omission is considered.

One advantage that conductors now have is the ability to quickly contact composers with their questions. It became apparent through this study that the creators of these compositions welcome questions regarding their works and would be glad to assist in making these types of decisions.

SELECTED WORKS NOT MEETING CRITERIA BUT SHOULD BE MENTIONED

Throughout the course of this research project, many pieces were discovered that, for one reason or another, fell just outside the scope and delimitation of this study. In many cases, the instrumentation did not fit the minimum requirements to reasonably say the work was for concert band. Some of these works were written for *Wind Orchestra*, the instrumentalists from the symphony orchestra minus the string section. With this classification, often the saxophones and euphoniums are left out of the instrumentation. The compositions that follow deserve recognition and are fine works for wind instruments and organ.

**Concerto for Organ, Winds, and Percussion**

FINDINGS

The process of finding works with specific instrumentation is difficult. In searching numerous webpages and online catalogs, very few have a system that is searchable according to the instruments employed in certain works. At the beginning of this research project, I was aware of a handful of compositions that fit within this category, learning of these by having played them or speaking to others that had either played or conducted them. The Wind Repertory Project database was very helpful as an initial search as their page can be searched by instrumentation through keywords. However, as a work in progress, many pieces, composers, and complete instrumentations do not yet exist.

Few publisher websites have the availability of a search engine that will search the instrumentation of a piece. Many, under the heading of instrumentation, list concert band. If one is fortunate enough to find a title with a score preview, an instrumentation may or may not be accessible. The accuracy of the instrumentation on some of these websites has been found to be not entirely accurate, as if a generic concert band instrumentation were applied to the work based on its classification.

The Music Publisher Association of the Unites States (MPA)\(^9\) maintains an online directory of over 500 “publishers” from the United States as well as a number of international contacts. While this seems to be a very large number of publishers that can be contacted, there is a problem with classification of different types of publisher. Publisher in this case can mean one that produces print music or publications for ensembles, or it could refer to music publishers who publish songs and records to the music industry. Without a way to filter the directory, the researcher is left to visit each listing’s website in order to determine each listing’s category.

Of the 541 publishing companies compiled from the MPA Director and other online searches, 210 (38%) were identified as publishers of items other than print music. The remaining 331 publishers were contacted via email regarding their publications in order to identify works that fit the study. Of the 331 publishers contacted, 25 (7.5%) responded that they had this type of work in their catalog. Of the remaining, 102 (31%) responded that they did not have this type of music or that they did not have the means to search through their catalog to identify these works. Of the 331 identified publishers, 204 (61.5%) did not respond to the email, were marked “unable to contact” because accurate contact information was not available, or they could not be reached after multiple attempts. Some of these would be later identified as having these types of works in online searches, but are still marked as “unable to contact.” Each of these publishers are categorized and listed in the appropriate appendices.

Another finding in this research study was the number of publishers who are now represented by larger publishing companies. Although still listed in the MPA, many are no longer publishing works and have sold their publishing rights to larger companies. One publisher still listed in the MPA directory responded that they had not published music for over ten years. Some indicated that their specialty was choral music or jazz music and had no publications for concert band at all. Many responses indicated that their publications were now produced by companies such as Hal Leonard, Carl Fischer, or any number of larger companies. For example, the J.W. Pepper website \(^\text{10}\) lists 50 publishers that they now represent in their catalog. A category system to identify the publishing type of each entry and even a searchable listing of the imprints held by each company within the directory would be very helpful to MPA members and those utilizing this service.

Looking away from the larger publishers, many composers are now publishing their own works, distributing either hard copies or many through electronic delivery where ensembles print music on their own. The websites for the individual composers tend to have much more information, including complete instrumentation, background, and program notes for each piece. Contact information leads directly to the composer, many of whom were gracious to provide perusal scores for evaluation in this study. This does, however, create a hardship when searching for new music in a larger catalog. Individual compositions are not often included and, unless there is already a familiarity with the composition, composer, or his/her website, one will not find their works very easily.

The initial scope of this project was to provide an exhaustive listing of all music for concert band that included organ within the instrumentation. However, due to the number of pieces created each day that are not yet catalogued, lack of ability to completely search instrumentation for all works and publications, and the absence of an exhaustive listing of worldwide publishers, corporate or private, there certainly are many more pieces in this category to be discovered. This can be a start for conductors wanting to incorporate the use of the organ they may find in their concert venue.

AREAS FOR FURTHER RESEARCH

Knowing that there remains a possibility for concert band works that include organ to exist in smaller, international, or individual publishing companies, there is still room for collection of data in this area. The difficulties in locating these works still remain with the limited accessibility to instrumentation in databases or websites and a clear listing of publishers that print music for the concert band either exclusively or within their catalog. A compilation of
all publishers and their type of publication would prove to be very beneficial in projects like these.

The *Wind Repertory Project* has made great strides in creating a searchable database of these compositions with a myriad of compositions listed. However, one doesn’t have to look hard to find missing pieces, composers, and incomplete information. The *Wind Repertory Project* depends on contributions of conductors, directors, and students to complete information and update entries as needed. Information is always needed to fill the gaps and to make sure that new compositions are constantly being added. If everyone, including publishers from small to large were on board with this project, it could truly become a comprehensive database.

One blindsiding factor in this research was the inability of certain publishing companies to be able to search and find these works within their catalog. Some would simply reply that they had no way of finding this information on the limited system with which they were working. A quick change of database program or web program that is searchable with these holdings would be of great benefit. How would one find a concert band piece that featured solo trumpet? Unless the composer puts this information in the title, it could prove very difficult. The more accessible these compositions are, the more chance they have of being performed.

Ultimately, I am overwhelmed by the number of pieces that this study has brought to light that were unknown to me or any of my colleagues. In the way of further research, a means of categorizing these works so they are easier to find could possibly ensure their continued performance and give composers reason to write even more works for this specialized area. For those conductors who find themselves with a quality organ (or a suitable substitute), I would hope that this document would be of some assistance in selecting pieces that provide performers
and audience members alike the remarkable musical experience that comes from the effective combination of concert band and organ.

Matthew J. McCurry  
Creative Arts Center Suite 2101-C  
School of Music  
1436 Evansdale Drive  
Morgantown, WV 26505

Dear [composer],

At present, should band conductors find themselves in a venue with a quality organ, there is not an existing document to aid in finding wind band literature that includes organ within the instrumentation. Through preliminary research, you have been identified as a composer who has occasionally included the organ in your compositions for concert band. I am currently a graduate student at West Virginia University conducting a research study entitled The Inclusion of Organ in the Concert Band Instrumentation with an Annotated Listing of Original Works for Concert Band and Organ. In addition to the annotated listing of works, I would like to include composers' views on the inclusion of organ within the instrumentation as well as their thoughts on omission or substitution of the organ part. Would you consider completing a very brief questionnaire to provide your thoughts on this subject?

There is a link included at the bottom of this letter (or email) that will take you to the questionnaire. Since your time is very valuable, the questionnaire is intended to take 10-15 minutes for you to complete. Participation is voluntary and you may refuse to continue participation at any time. If you choose to participate, your responses may be used in the final publication of the project, however, none of the responses will be connected to any identifying information. Copies of the project will be distributed to my Doctoral Committee as well as the West Virginia University Library Electronic Thesis and Dissertations for standard distribution.

If you have any questions about this research study, you can call Dr. Scott Tobias, Director of Bands, West Virginia University at 304-293-3097. If you have any questions about your rights as a research participant, you can call the West Virginia University Institutional Review Board at 304-293-7073 and reference IRB# 1903503171.

Thank you for your time and for assisting me in these educational endeavors.

Sincerely,
Matthew J. McCurry  
matthew.mccurry@mail.wvu.edu

The Inclusion of Organ Within the Concert Band Instrumentation

**Questionnaire**

Please answer the following questions in as much detail as possible. In order to keep the questionnaire anonymous, please do not use any identifying information in your answers.

**What does the inclusion of the organ within the concert band instrumentation add to the overall composition?**

Your answer

**When a conductor is choosing music for a performance and there is not an organ available (electronic or pipe), would you consider a synthesized organ sound a suitable substitution?**

Your answer

**Are there situations where substitution would not be acceptable and omission would be preferred?**

Your answer

**Does omission of the organ part take away from the original work as it was intended?**

Your answer

Never submit passwords through Google Forms.
The Inclusion of Organ Within the Concert Band Instrumentation

* Required

Thank you!

Final Submission *

☐ By checking this box, I am voluntarily participating in this questionnaire and giving consent for my responses to be used in the final publication. I have not been identified in any way in this process.
